Subject: GLYCERIN (STERILE)???

I noticed that this one is "broken" also……

We need to have one 'stock" supply that is made every 2-3 months + every lot must be sterility tested. This "stock" will be the ingredient for all 100% glycerin products….drops, vials…etc. Do you want to use this as ingredient for "all" sterile /glycerin containing products, or do you final filter anyhow? I think that it should be the only source because many of the phenol/glycerin, dextrose + glycerin….etc. orders are so small that you never have any testing . The big issue is the small orders in 2ml vials since they are being injected in/near the epidural space = increase problems!……

Get back to me fast so that I can fix all formulations.
We must have a clean paper trail.
